How do I connect my device to the GSM/LTE network?

First, you need to connect **LTE antennas** for the device (*notice* if you have **moving object** where the device will be located, you need to connect **two antennas**, for stable connection)

After that go to device configuration menu, go to the **System/Network/GSM/GSM/LTE configuration** tab and check in the **Default SIM Slot** menu whether the SIM card is **right** in the slot, if everything is correct, you have successfully connected to GSM/LTE network
