

# How do I turn on the tracker?

First you need to connect the GPS module to your device

After that, you should enter the [device configuration menu](#) and go to the **System/Tracker** tab.

After you turn the tracker on, you can configure it to your needs: use GPS module or static coordinates, set the sending via IPS server and create a point by time distance and angle etc.

Tracker state: GPS OFF    Server state: NOT CONNECTED
